

CMPS 350 · Web Development Fundamentals

Tutorial 12 · Forms and Files

Develop an application to upload and manage a collection of files.

1. Create a new Next application using: `npx create-next-app@latest` .
2. Create a Prisma model for storing a document with `name`, `type`, `size`, and `content` properties.
3. Create an endpoint to upload files and store them it in the database.
4. Design an interface to upload multiple files.
5. Display a link and a button to download/view and delete an uploaded file.
